DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, 25, 26, drawn to methods of nucleic acid amplification, classified in class 435, subclass 91.2.
- II. Claims 15-24, drawn to nucleic acid detection, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions in Group I and in Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the invention of Group I is a polymerase based detection method while the invention of Group II is a ligase based detection method. These enzymes have different specificities, the mode of operation is significantly different and the result would yield different molecules upon completion of each of the separate methods of Group I and Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination

Art Unit: 1634

purposes as indicated is proper. In particular the search for Group I will focus on PCR based detection assays while the search for Group II will focus on ligation based detection assays. To demonstrate the burden, a medline search found 106,410 references with the term PCR, and found 29,476 terms beginning with liga? and referring to DNA. These are separate art areas and searching both groups represents a significant burden.

A telephone call was made to Stanley Fisher on December 10, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
